

# Exoglossic Government and Internet Usage

Bastiaan Quast

March 2016

# 1 Introduction

Data suggest that places with exoglossic government languages have low growth (maturity-stage without being near saturation).

In 1 shows that there are two regions clearly lagging in internet growth, firstly sub-Saharan African and secondly South Asia. These two regionals are also characterised by having exoglossic or autochthonous government languages. Unlike other formerly colonial regions such as south-east Asian Latin America, the populous generally does not speak the languages of the government.

Figure 1: Internet Growth by Region

```
ggplot(data = reggrow) +  
  geom_line(aes(x = year, y = usage, group=region, colour=region))
```
